Coal Combustion Residuals Impoundment Assessment Reports

As part of the US Environmental Protection Agency's ongoing national effort to assess the management of coal combustion residuals (CCR), EPA is releasing the final contractor reports assessing the structural integrity of impoundments and similar management units containing coal combustion residuals, commonly referred to as "coal ash," at coal fired power plants. Most of the impoundments have been given hazard potential ratings (e.g. less than low, low, significant, high) by the state, EPA contractor, or company which are not related to the stability of the impoundments but to the potential for harm should the impoundment fail. For example, a "significant" hazard potential rating means impoundment failure can cause economic loss, environmental damage, or damage to infrastructure.

Additional Information

- [Alliant Energy Corporation's Facility in Burlington, Iowa](#)
- [AEP's Philip Sporn Power Plant in New Haven, WV](#)

EPA has assessed all of the known units with a dam hazard potential rating of "high" or "significant" as reported in the [responses](#) provided by electric utilities to EPA's [information requests](#) and additional units identified during the field assessments. EPA will release additional reports as they become available.

The reports being released now have been completed by contractors who are experts in the area of dam integrity, reflect the best professional judgment of the engineering firm, and are signed and stamped by a professional engineer. The reports are based on a visual assessment of the site, interviews with site personnel, and the review of geotechnical reports and studies related to the design, construction and operation of those impoundments, if available. The engineering firms also reviewed past state/federal inspections of the impoundments. EPA contractors were not authorized to conduct any physical drilling, coring or sampling while on site; however, they did review studies which may have included such information. These reports include complex engineering evaluations and use terms which may be unfamiliar to the general public. Also, the contractors were asked to rate the impoundments as "satisfactory," "fair," "poor," or "unsatisfactory," terms commonly used in the field of dam safety. Expert experience has shown that only impoundments rated as "unsatisfactory" pose immediate safety threats. None of the impoundments assessed so far have received an "unsatisfactory" rating. Impoundment ratings noted in the reports should be taken in the proper context, since a unit may be found to be structurally sound while it may receive a fair or poor rating based on other factors such as lack of information.

Draft copies of these reports have been reviewed by the facilities and the states for factual accuracy and their comments on the draft reports have also been posted. EPA continues to review the reports and the technical recommendations, and is working with the facilities to ensure that the recommendations are implemented.

EPA has provided a copy of the final report to each facility and has requested that the facility implement the recommendations in the reports and provide plans for taking action. These plans are being posted below as they become available. Should facilities fail to take sufficient measures, EPA will take additional action, if the circumstances warrant, and will be devoting special attention to those facilities receiving a "poor" rating.

Ratings summary for the assessments:

	First Round	Second Round	Third Round	Fourth Round	Fifth Round	Sixth Round	Seventh Round	Eighth Round	Ninth Round
Satisfactory	22	31	15	23	15	3	34	9	29
Fair	15	9	12	17	14	27	10	16	18
Poor	6	0	10	30	9	14	12	21	4
Unsatisfactory	0	0	0	0	0	0	0	0	0
Total number of units	43	40	37	70	38	44	56	46	51

The companies in the table below have at some point claimed some information they have provided to the EPA related to their coal ash impoundments is confidential business information (CBI). While EPA reviews these claims, the information that is claimed as CBI is not posted to EPA's website. If these claims are accepted by the EPA, the coal ash reports will be posted in redacted form. If EPA denies these claims, all the information will be made publicly available and posted to this website.
